Claim Rejections - 35 USC § 102/103

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148

USPQ 459 (1966), that are applied for establishing a background for determining

obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

7. Claims 7-10 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Suzuki et al. (US 4731311).

Regarding claims 7 and 9, Suzuki is directed towards a electrode for a secondary battery (Column 8, Lines 25-38) formed from a polypyrrole film prepared by a polymerization reaction (Column 4, Lines 41-49) using pyrrole or pyrrole derivatives (Column 5, Lines 47-63), a base material of resins which contain no hydroxyl group such as polyvinyl chloride, polytetrafluoroethylene (halogenated hydrocarbon; Column 5, Lines 28-39), an electrolyte including lithium trifluoromethanesulfonate (Column 9, Lines 21-40), and a metal foam electrode substrate (Column 10, Lines 47-69).

Regarding claims 8 and 10, the teachings of Suzuki as discussed above are herein incorporated. Suzuki further discloses an example which forms a flexible film to be used as the anode material for a battery (Column 25, Line 25 - Column 26, Line 13).

The product-by-process limitations of claims 7-10 are not given patentable weight since the courts have held that patentability is based on a product itself, even if the prior art product is made by a different process (see In re Thorpe, 227 USPQ 964, (CAFC 1985), In re Brown, 173 USPQ 685 (CCPA 1972), and In re Marosi, 218 USPQ 289, 292-293 (CAFC 1983)). In the event any differences can be shown for the product of the product-by-process claims 7-10, as opposed to the product taught by Suzuki et al. (US 4731311), such differences would have been obvious to one of ordinary skill in the art as a routine modification of the product in the absence of a showing of unexpected results.
